Since 1965, the founders of CLM VIBETECH, Inc. have produced, serviced, repaired and restored Vibratory Equipment. Drawing on the experience from working on almost every brand of vibratory machines, CLM VIBE TECH Inc. has designed a full line of vibratory equipment using the best features available in today’s industry. As a customer said after seeing all the brands in the plant for repair, “Looks like you build the best and fix the rest”. That statement is very true. From the inside out our machines are built with experience.

Unbeatable Features...

- Our infrared heat system is more economical and efficient than heated oil/water systems.
- Process channel is heated directly from the bottom, distributing heat more evenly than standing heat lamp assemblies.
- All heavy-duty welded construction.
- Load chute, extended internal screen deck and dual heat banks are standard.
- Exterior side walls are insulated for operator safety.
- Cool-down timer allows machine to run while cooling at end of cycle, eliminating scorching and cobb deterioration.
- Less floor space required than competitive models.
- Moveable gate available for longer cycle times.
- Dust covers and dust collectors can be designed for any system.
- We can design our cobb dryers to work “in line” with your existing finishing machines.
The heart of our oil lubricated vibratory dryer is the drive cartridge...

1. Heavy-duty, over-sized, precision machined drive shaft.
2. Highest quality double-row spherical bearings are fitted to drive shaft, with clearance to allow for heat expansion, unlike pressed bearings that can build-up heat and reduce bearing life.
3. Lightweight non-abrasive seals will never damage shaft.
4. For service, our extra-heavy walled cartridge is the most easily accessible and removable cartridge in the industry.
5. Tapered drive clips are pulled down with grade 9 bolts, superior to relying on bolt shear strength.

The conical structure and the center tube are designed to optimize the transfer of energy from the drive cartridge to the process channel by distributing it correctly and without unnecessary stress to the structure.

Due to ongoing design improvements, design and specifications are subject to change without notice.

In addition to our line of Dryers we have a full line of: Vibratory Finishers, Vibratory Combos; Finisher/Dryer, Long Radius Finishers; for excellent steel ball burnishing and longer cycle times, can be set up for continuous operations, Helix Finishers; for continuous operations, Tub Finishers; for batch processes

* Single heat bank system

**Dryer Options:**
- Manual Movable Gates
- Pneumatic Gates • PLC Automation
- Dust covers • Dust collectors
- Rigid Pneumatic sound covers
- Air Knife • Step-down Screens
- Material Handling • Media Classifying
- Shaker Screeners

**Accessories for all makes:**
- Drains • Gates • Compound System
- Screens • Noise and Dust Covers

**Services:**
- Process Evaluation: send us your sample parts for a free process evaluation.
- System Design: we can design and build custom systems from simple batch processes to fully automated systems.
- Vibratory Equipment Repair: we service all makes and models of vibratory equipment from basic repair to complete restoration.
- Relining: on all makes and models, 3 grades of urethane available from cold to hot pour.

**For Service Call... 1-800-741-0670**
